ENGINEERS GUILD LTD / COMPLIANCE & REGULATORY SERVICES

# Certification Services

Compliance & Regulatory Services | Certification Schemes and After Certification

SERVICE PROFILE

A detailed overview of scope, capabilities and potential areas of support.

# Overview

Taking a product into a new market can involve different certification schemes, conformity assessment procedures and technical requirements. Understanding the right route from the beginning helps businesses prepare the necessary evidence and coordinate the steps involved.

Engineers Guild supports businesses through the certification process, from identifying the appropriate pathway to coordinating with the relevant certification bodies and laboratories.

# Our Services

Our certification services are organized into two areas.

## i. Certification Schemes

**Global Market Access Certification**
Identification of certification requirements across target markets, including the appropriate schemes and certification bodies.

**NRTL & CB Certification**
Support with North American certification through Nationally Recognized Testing Laboratories (NRTLs), and the IECEE CB Scheme, which facilitates the use of test reports across participating national certification bodies.

**CE Conformity Support**
Guidance on applicable European directives, regulations and standards, and the conformity assessment requirements for CE marking.

**EMC/EMI Certification**
Planning and coordination of the certification-related requirements for electromagnetic compatibility and interference, according to applicable standards and market requirements.

## ii. After Certification

**Recertification & Renewals**
Tracking certification validity periods, renewal dates and recertification requirements to help maintain valid certification.

**Shipping Documentation Support**
Assistance with the documentation required for shipping certified products to their intended markets.

# Our Approach

1. **Scope:** Establish the product, target markets and certification objectives.
2. **Identify:** Determine the relevant certification pathway, requirements and external bodies involved.
3. **Prepare:** Coordinate the technical evidence and supporting documentation needed for assessment.
4. **Coordinate:** Manage certification requirements, timelines and communication with the relevant bodies and laboratories.
5. **Maintain:** Track certification validity, renewal dates and further certification requirements.

### Who We Work With

- Product developers preparing for their first certification
- Manufacturers of electrical and electronic equipment
- Exporters seeking certification for new markets
- OEMs and suppliers working to meet buyer certification requirements

### Value to Clients

- Select an appropriate certification route before committing time and resources.
- Avoid unnecessary testing or certification activities caused by misunderstanding the requirements.
- Reduce the likelihood of incomplete submissions and repeated requests for supporting evidence.
- Keep certification activities, external parties and timelines coordinated.
- Avoid overlooking certificate expiry dates and renewal requirements.

# Contact Us

To discuss your project requirements, please contact:

**Engineers Guild (Pvt) Ltd.**
2nd Floor, Plaza No. 51, Sector 02, DHA Rahbar, Lahore, Pakistan
Email: info@megl.ca | | Phone: +92 (322) 449-4453. | Web: https://engineersguildltd.com/

Certificates and conformity decisions are issued or made by the relevant authorized bodies, where applicable. The scope of support depends on the product, target market and applicable certification scheme.
